

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-fourth day of March, in the year of our Lord nineteen hundred and ninety-nine, and of the Independence of the United States of America the two hundred and twenty-third.

WILLIAM J. CLINTON

Proclamation 7176 of March 25, 1999

Education and Sharing Day, U.S.A., 1999

*By the President of the United States of America
A Proclamation*

Our Nation was founded at a time of extraordinary change, as the world began to move from an agrarian to an industrial economy. Today, as we approach the 21st century, exciting innovations in science and technology are revolutionizing our society, and once again Americans must adapt to the demands of a new era. Beckoning us with exciting new challenges and far-reaching opportunities, our future depends as never before on our Nation's commitment to excellence in education.

Americans have met the dynamic changes in our society not only through education but also by finding strength in our shared goals and values. And, as we prepare for the challenges of a new millennium, these time-honored principles must remain an important part of our children's education. Far more than the accumulation of facts and figures, a well-rounded education that will serve our children throughout their lives must also include the wisdom and insights of past generations. Family members, teachers, administrators, and neighbors should share their experiences and ideals with young people to help them develop into mature, confident, and responsible adults.

An esteemed scholar and inspired religious leader, Rabbi Menachem Mendel Schneerson, the Lubavitcher Rebbe, devoted his life to empowering young people through education. His belief in the importance of intellectual and spiritual enlightenment led him to establish more than 2,000 educational and social institutions around the world. Promoting faith, family, and community, his work enriched our society and helped to lay the foundation for our continued progress.

On this day and throughout the year, let us rededicate ourselves to the ideals of education and sharing that were championed by Rabbi Schneerson and are embraced by compassionate leaders across our country. As our society continues to change and evolve, let us work with keen minds and warm hearts to forge a future of peace and prosperity for all our children.

NOW, THEREFORE, I, WILLIAM J. CLINTON, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim March 28, 1999, as Education and Sharing Day, U.S.A. I invite Government officials, educators, volunteers, and all of the people of the United States to observe this day with appropriate activities, programs, and ceremonies.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-fifth day of March, in the year of our Lord nineteen hundred and ninety-nine, and of the Independence of the United States of America the two hundred and twenty-third.

WILLIAM J. CLINTON

Proclamation 7177 of April 1, 1999

Cancer Control Month, 1999

By the President of the United States of America

A Proclamation

Each year for more than half a century, our Nation has dedicated the month of April to reaffirming our commitment to developing more effective prevention, detection, and treatment of cancer and to recognizing the progress that we have made in fighting this devastating disease.

Today we are reaping the rewards of our long-standing efforts to combat cancer as researchers make remarkable progress virtually every day. Over the past several years, for example, scientists have identified genes involved in a number of cancers, including cancers of the breast, prostate, kidney, skin, and colon. In the first year of the Cancer Genome Anatomy Project at the National Cancer Institute (NCI), researchers succeeded in identifying more than 300,000 DNA sequences and 12,000 new genes—double the initial expectation. The newly created Cancer Genetics Network will help scientists answer the many clinical questions raised by these discoveries. This national network will link participating cancer research centers and strengthen their efforts not only to identify genes that predispose people to cancer, but also to learn better methods for counseling, testing, and monitoring people for cancer susceptibility. These and other recent advances are providing Americans with our most powerful weapons to defeat cancer: early detection and immediate treatment.

Recognizing the great promise such findings hold for our battle against cancer, my Administration has dedicated unprecedented Federal resources toward cancer research. The omnibus appropriations bill I signed this past October increased funding for the NCI by \$400 million. This increase—the single largest increase in funding for cancer and medical research in history—sets the NCI budget at nearly \$3 billion, enabling it to fund critical new research, including 10 new clinical trials for breast cancer treatment. Last year we saw one of the most significant advances to date in cancer prevention research with the discoveries from the landmark Breast Cancer Prevention Trial. This study, a national clinical trial sponsored by the NCI, found that the incidence of breast cancer fell by 49 percent among women taking the anti-estrogen drug tamoxifen. Based upon this finding, last October, the Food and Drug Administration approved tamoxifen for preventative use by women at risk for breast cancer.

Through the Department of Defense, we are also awarding \$60 million in grants for prostate cancer research. These grants are funding innovative new studies to determine the causes of prostate cancer, develop
